

Jackson Newman

(650) 649-8204 — jpnewman167@gmail.com — LinkedIn — GitHub

Technical Skills

Programming Languages: Python, SQL, Bash, JavaScript, Typescript, JSON, YAML, C, C++, Java

Frameworks: Node.js, FastAPI, Spring Boot, JPA, Express.js, JUnit, LangChain, LangGraph

Databases: PostgreSQL, Oracle DB, Firebase, Redis

Developer Tools: Git, Docker, Linux, AWS, GCP, GitHub Actions, Jenkins, Maven

Concepts: REST APIs, CI/CD, Microservices, Unit Testing, Distributed Systems, Performance Optimization

Work Experience

Visa — Foster City, CA *Software Engineer*

April 2025 – October 2025

- Designed and implemented a backend feature for audit viewing, reducing audit time by 90%.
- Co-led an AI image analysis MVP automating branding reviews, reducing turnaround time by 60%.
- Implemented 10+ Java REST APIs to retrieve, edit, and persist organization and user data.
- Developed 2 Python APIs to trigger and monitor AI agent workflows and display responsive progress.
- Redesigned LangGraph architecture for batched LLM inference, increasing system performance by 80%.

AMD — San Jose, CA *Software Engineer Intern*

June 2023 – September 2023

- Accelerated Vivado constraint processing by 50% by implementing optimized C++ pattern matching.
- Reduced total application memory usage by 600MB by refactoring to use the Tessil C++ hash map library.
- Developed and automated unit test benchmarks for pattern matching performance testing across 30 projects.
- Created and automated Vivado memory and encryption tests, decreasing testing time by 50%.
- Automated security key upgrades across 10+ repositories, reducing maintenance time by 8
